

Montaż, Naprawa i Konserwacja Dźwigów s.c. – A reliable partner

We are a company dedicated to the comprehensive services for lifting equipment and hydro batteries installed in wind turbines.

The company is on the market for over 40 years.

We can get immediately to the client, thanks to specialized staff and a number of mobile services. We have the powers for:

Maintenance and operation of equipment, installation, modernization and electric E and D.

We work both with manufacturers: of wind turbines and lifting equipment installed in them.

We are authorized by the companies: **Tractel GROUP**: Tirak, Blockstop, **POWER CLIMBER**: mobile platforms and **HOFFMANN Fördertechnik GmbH**: liftket and star liftket electric hoists

We prepare complete technical documentations required by the Office of Technical Inspection for: mobile platforms, electric hoists, cranes, gantries and hydro batteries.

We prepare the devices for registration by UDT and because of UDT registration requirements we participate in them.

We offer maintenance services for: mobile platforms, Electric hoists, gantries, winches, BLOCKSTOP systems and hydro batteries (in accordance with the UDT directives).

We repair equipment (mechanical and electrical works). As a entitled company, we make entries in the maintenance books as a condition for preserving the manufacturer's warranty for the existing annual surveys, two-or five-year maintenance.

We use original spare parts imported directly from producers. Through our service brigades, most of the failures are possible to diagnose and remove, on - site. For major repairs, we have a workshop at the center of Słupsk.

Immediately arrival!

We perform measurements of electrical equipment necessary for their registration by the Office of Technical Inspection, as well as during subsequent use.

We perform the Main Power Points measurements.

We make the workplace light intensity measurements needed in passing turbines for use.

We perform an annual technical inspections for: - a dedicated hardware to work at heights: harnesses, ropes, hooks, connectors, dampers, trolleys to the assurance rail systems.

- Communication shafts: ladders inside the turbines, landing platforms and rails.

Owner's obligation to conduct such research, regulates the Decree of the Polish Minister of Infrastructure dated 6 February 2003.

We organize trainings for:

- maintenance of mobile platforms, hoists, cranes and gantries (completed by the State examination in the Office of Technical Inspection), necessary to work with electrical devices,
- fire protection training
- intensive first aid training

After completing the courses, certificates and permissions are issued.

We invite to cooperation
